# FEATURES/BENEFITS

Bryant's air-cooled air conditioning split systems:

- Provide a logical solution for commercial needs
- Have a rugged, dependable construction
- Are available in single and circuit scroll compressor capacity control
- Have cooling capability up to 125°F (52°C) ambient and down to 40°F (4°C) ambient standard.

These dependable outdoor air cooled condensing units match Bryant's indoor-air handlers to meet a wide selection of cooling solutions.

## Constructed for long life

The 569J\*(A,B,G,H) single circuit and 569J\*(D,E,F) dual circuit, scroll compressor models are designed and built to last. The high efficient designed outdoor coil construction allows for a more efficient design in a smaller cabinet size that utilizes an overall reduction in refrigerant charge. Where conditions require, special coil coating coil protection option is available. Cabinets are constructed of prepainted galvanized steel, delivering unparalleled protection from the environment. Inside and outside surfaces are protected to ensure long life, good looks, and reliable operation. Safety controls are used for enhanced system protection and reliability.

Each unit utilizes the Comfort Alert™ diagnostic and troubleshoot control system. This protects the units operation and provides valuable diagnostic information when required.

## Factory-installed options (FIOPs)

Certified and pre-engineered factory-installed options (FIOPs) allow units to be installed in less time, thereby reducing installed cost.

FIOPs include:

- low ambient controls which provide cooling operation down to -20°F (-29°C) ambient temperatures
- non-fused disconnect
- 115-v GFI (ground fault interrupter) convenience outlet, powered and non-powered available
- special coil coating coil protection
- louvered hail guard

## Efficient operation

These air cooled condensing units will provide EERs up to 12.0 (tested in accordance with AHRI standard 340/360).

This high efficiency operation will help reduce overall operating cost and energy consumption.

## Controls for performance dependability

The 569J condensing units offer operating controls and components designed for performance dependability. The high efficiency hermetic scroll compressor is engineered for long life and durability. The compressors include vibration isolation for quiet operation. The high-pressure switch protects the entire refrigeration system from abnormally high operating pressures. A low-pressure switch protects the system from loss of charge. These units also include anti-short-cycling protection, which helps to protect the units against compressor failure.

All units include a crankcase heater to eliminate liquid slugging at start-up. Each unit comes standard with the Comfort Alert control system. This provides:

- System Go LED indicator
- Fault LED indicator
- Compressor fault LED indicator
- Phase loss protection
- Phase reversal protection
- Safety pressure indicator
- Anti-short cycle protection

Innovative Bryant 524J packaged air handlers are custom matched to 569J\* condensing units.

Information on matching 524J DX packaged air handler follows for convenience. See separate product data for more details. The 524J Series has excellent fan performance, efficient direct-expansion (DX) coils, a unique combination of indoor-air quality features, and is easy to install. Its versatility and state-of-the-art features help to ensure economical performance of the split system both now and in the future.

## Indoor-air quality (IAQ) features

The unique combination of IAQ features in the 524J Series air handlers help to ensure that only clean, fresh, conditioned air is delivered to the occupied space.

Direct-expansion 4 row cooling coils prevent the build-up of humidity in the room, even during part-load conditions.

Standard 2-in. (51mm) disposable filters remove dust and airborne particles from the occupied space for cleaner air.

The pitched, non-corroding drain pan can be adjusted for a right-hand or left-hand connection to suit many applications and provide positive drainage and prevent standing condensate.

The accessory economizer can provide ventilation air to improve indoor-air quality by using demand controlled ventilation.

## Economy

The 524J Series packaged air handlers provide reduced installation expense and energy-efficient performance.

Quick installation is ensured by the multi-poise design. Units can be installed in either the horizontal or vertical configuration without modifications. Fan motors and contactors are pre-wired and thermostatic expansion valves (TXVs) are factory-installed on all 524J models.

High efficiency, precision-balanced fans minimize air turbulence, surging, and unbalanced operation, cutting operation expenses.

The economizer accessory precisely controls the blend of outdoor air and room air to achieve comfort levels. When the outside air enthalpy is suitable, outside air dampers can fully open to provide "free" cooling without energizing mechanical cooling.

## Rugged dependability

The 524J series units are made to last. The die-formed galvanized steel panels ensure structural integrity under all operating conditions. Galvanized steel fan housings are securely mounted to a die-formed galvanized steel fan deck.

Rugged pillow-block bearings (524J\*14) are securely fastened to the solid steel fan shaft with split collets and clamp locking devices. Smaller unit sizes have spider-type bearings.

## Coil flexibility

Model 524J direct-expansion coils have galvanized steel casings; inlet and outlet connections are on the same end. The coils are designed for use with Puron® (R-410A) refrigerant and have  $\frac{3}{8}$ -in. diameter copper tubes mechanically bonded to aluminum sine-wave fins. The coils include matched, factory-installed thermostatic expansion valves (TXVs) with matching distributor nozzles and offer a removable power element and extended connections.

## Easier installation and service

The multipoise design and component layout ensures quick unit installation and operation. Units can be converted from horizontal to vertical operation by simply repositioning the unit. Drain pan connections are duplicated on both sides of the unit. The filters, motor, drive, TXVs, and coil connections are all easily accessed by removing a single side panel.

### 569J Factory-Installed Options

**E-coated Aluminum-Fin Coils** have a flexible and durable epoxy coating uniformly applied to all coil surfaces. Unlike brittle phenolic dip and bake coatings, E-coating provides superior protection with unmatched flexibility, edge coverage, metal adhesion, thermal performance, and most importantly, corrosion resistance.

**E-coated coils** provide this protection since all coil surfaces are completely encapsulated from environmental contamination. This coating is especially suitable in industrial environments.

**Pre-coated Coils** provides protection in mild coastal environments.

**Low-Ambient Temperature Kit (MotorMaster® I) (-20°F [-29°C])** controls outdoor-fan motor operation to maintain the correct head pressure at low outdoor ambient temperatures.

**Louvered Hail Guard** protects coils against damage from flying debris and hail.

**Non-Fused Disconnect Switch** is used to remove power locally at the condensing unit. This switch also includes a power lockout capability to protect the service person. This lockout switch saves the service person time and effort because there is no need to access a distant disconnect switch while servicing the unit.

NOTE: Non-fused disconnect switch cannot be used when unit MOCP electrical rating exceeds 80 amps.

### 569J Field-Installed Accessories

**Low-Ambient Temperature Kit (MotorMaster I) (-20°F [-29°C])** controls outdoor-fan motor operation to maintain the correct head pressure at low outdoor ambient temperatures.

**Louvered Hail Guard** protects coils against damage from flying debris and hail.

**Condenser Coil Grille** protects condensing unit coil from impact by large objects and vandalism.

**Bryant's Line of Thermostats** provide both programmable and non-programmable thermostats. The Commercial Electronic thermostats provide 7-day programmable capability for economical applications.

## 569J FACTORY-INSTALLED OPTIONS

### 524J Field-Installed Accessories

**Two-Row Hot Water Coils** have  $5/8$ -in. diameter copper tubes are mechanically bonded to aluminum plate fins. Coils have non-ferrous headers.

**One-Row Steam Coil** has 1-in. OD copper tube and aluminum fins. The Inner Distributing Tube (IDT) design provides uniform temperatures across the coil face. The IDT steam coils are especially suited to applications where sub-freezing air enters the unit.

**Electric resistance heat coils** have an open-wire design and are mounted in a rigid frame. Safety cutouts for high temperature conditions are standard.

**Economizer (Enthalpy Controlled)** provides ventilation air and provides "free" cooling if the outside ambient temperature and humidity are suitable. The economizer can also be used in conjunction with Bryant thermostats and CO<sub>2</sub> sensors to help meet indoor air quality requirements. The economizer can be used in both vertical and horizontal positions.

**Discharge Plenum** directs the air discharge into the occupied space; integral horizontal and vertical louvers enable redirection of airflow. This accessory is available unpainted or painted.

**Return-Air Grille** provides a protective barrier over the return-air opening and gives a finished appearance to units installed in the occupied space. This accessory is available unpainted or painted.

**Subbase** provides a stable, raised platform and room for condensate drain connection for floor-mounted units. This accessory is available unpainted or painted. Overhead suspension package includes necessary brackets to support units in horizontal installations.

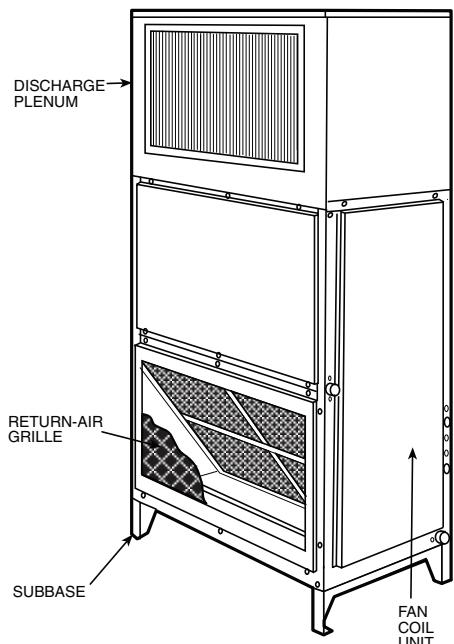

**Overhead suspension package** includes necessary brackets to support units in horizontal installations.

**CO<sub>2</sub> Sensors** can be used in conjunction with the economizer accessory to help meet indoor air quality requirements. The sensor signals the economizer to open when the CO<sub>2</sub> level in the space exceeds the setpoint. A programmable thermostat can also be used to override the sensor if the outside-air temperature is too high or too low.

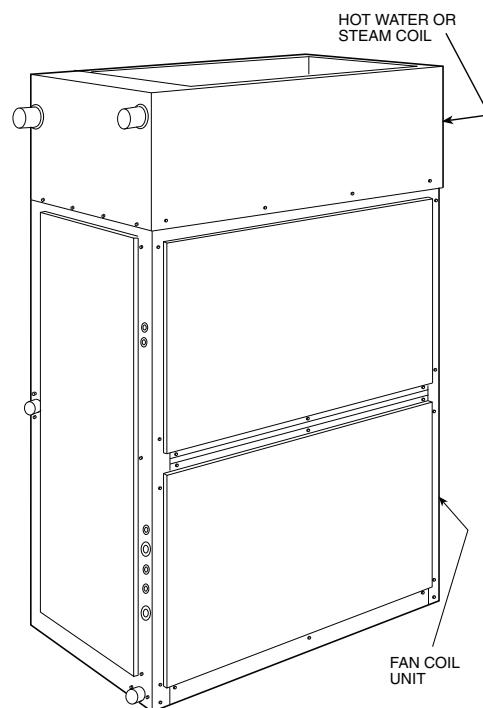

**Condensate Drain Trap** includes an overflow shutoff switch that can be wired to turn off the unit if the trap becomes plugged. The kit also includes a wire harness that can be connected to an alarm if desired. The transparent trap is designed for easy service and maintenance.

### NOTES:

- The MCA and Fuse values are calculated in accordance with The NEC, Article 440.
- Motor RLA and LRA values are established in accordance with Underwriters' Laboratories (UL) Standard 1995.
- The 575-v units are UL, Canada-listed only.
- Unbalanced 3-Phase Supply Voltage**

Never operate a motor where a phase imbalance in supply voltage is greater than 2%. Use the following formula to determine the percentage of voltage imbalance.

Example: Supply Voltage is 230-3-60

$$\% \text{ Voltage Imbalance} = 100 \times \frac{\text{max voltage deviation from average voltage}}{\text{average voltage}}$$

Example: Supply voltage is 230-3-60

  
 AB = 224 v  
 BC = 231 v  
 AC = 226 v

$$\text{Average Voltage} = \frac{(224 + 231 + 226)}{3} = \frac{681}{3} = 227$$

Determine maximum deviation from average voltage.

$$(AB) 227-224 = 3 \text{ v}$$

$$(BC) 231-227 = 4 \text{ v}$$

$$(AC) 227-226 = 1 \text{ v}$$

Maximum deviation is 4 v.

Determine percent of voltage imbalance.

$$\% \text{ Voltage Imbalance} = 100 \times \frac{4}{227} = 1.78\%$$

This amount of phase imbalance is satisfactory as it is below the maximum allowable 2%.

**IMPORTANT:** If the supply voltage phase imbalance is more than 2%, contact your local electric utility company immediately.
