HOME AUTOMATION
The heart of a smarter home.

**Quick Start Guide for
steps on how to create
an automation or scene.**

You can automate your system to do many things.
This guide will walk you through triggering your camera to record.

## DOOR / WINDOW SENSOR TRIGGERS INDOOR CAMERA TO RECORD

STEP 1

After logging into the site, select *Settings* from the hamburger menu on the top left. Select *Automation (Scenes)* from the drop down menu in the *Settings* menu.

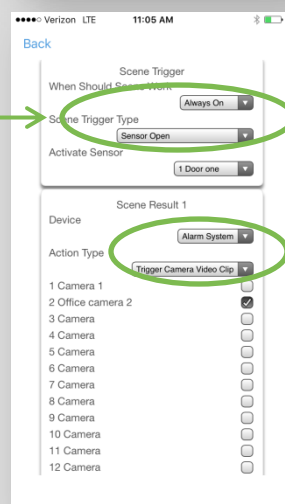

STEP 2

Select the next available scene, *"X Scene"* and name your automaton. Be sure to select a name that is intuitive to the homeowner.

STEP 3

Select *Always On* and decide what triggers the action (i.e. the door opens = sensor open). Next, select which sensor (i.e. front, side, window, closet) initiates the action.

STEP 4

In Scene Result 1, select *Alarm System* from the drop down menu. Next, select *Trigger Camera Video Clip* in the Action Type drop down menu. Check the box of which camera you want to record and hit *Save*. Your automation is now created.
