HOME AUTOMATION
The heart of a smarter home.

**Quick Start Guide for steps on how to create an automation or scene.**

You can automate your system to do many things. This guide will walk you through turning on a Z-Wave® device when a Window / Door sensor in opened.

CABINET DOOR OPENING TRIGGERS ADD-ON SIREN TO ALARM

STEP 1

After logging into the site, select *Settings* from the hamburger menu on the top left. Select *Automation (Scenes)* from the drop down menu in the *Settings Selector* menu.

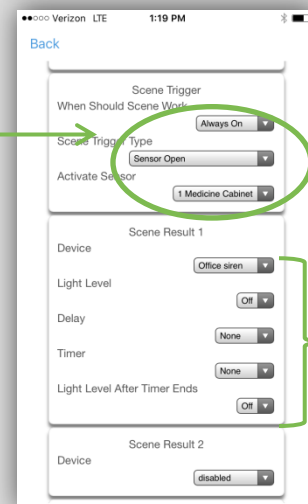

STEP 2

Select the next available scene, *"X Scene"* and name your automaton. Be sure to select a name that is intuitive.

STEP 3

Select *Always On* and decide what triggers the action (i.e. the cabinet door opens = sensor open). Next, select which sensor (in this case, medicine cabinet door).

STEP 4

In Scene Result 1, select the Z-Wave Device you want to turn on (In this case, office siren). Chose "On" for *Light Level* , this triggers the Z-wave device to turn on. Next, choose if you want a delay, and how long you want your siren to stay on, select "Off" in the *Light Level After Timer Ends* drop down menu to turn off the Z-wave device after your desired time. Click Save and your automation is now created.
